

Example: Risk Response Scoring

Snippet:

"PCA did not experience significant disruptions in its operations as a result of the pandemic and has maintained adequate availability of its workforce and supply of raw materials and services to continue to serve its customers."

Score Components:

- **[-3]** → Affirms absence of significant operational disruptions (mitigating).
- **[-1]** → Indicates stable workforce and supply chains (additional mitigation).

→ **Final Snippet Score** = **[-3]** + **[-1]** = **[-4]**

Reasoning Summary:

 **LLM** → *"Purely mitigating language produces a negative risk score (-4), reflecting reduced severity."*
